

WATER RECLAMATION SYSTEM

“THE CONCRETE GREY WATER SOLUTION”

FIBRA FILTER TECHNOLOGY

- Adjustable Particle Size Removal
- pH Control
- Low Energy Requirements
- Stainless Steel Construction
- UL Approved Controls
- Fully Automated
- Forward Flushing
- Low Maintenance
- Easily Scalable
- System Warranty

Control & Power Systems, Inc.

FEATURES

The Fibra Filter technology is your complete grey water solution. Its fully automated controls allow you to adjust pH and remove suspended solids. The scalable design allows us to meet your flow requirements.

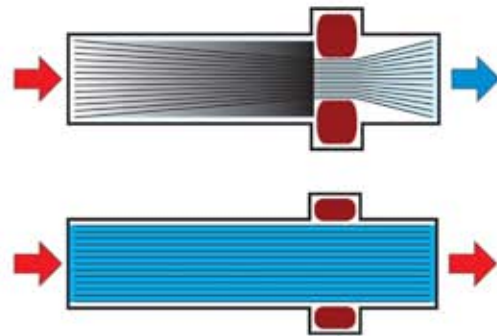

With the advantages of high deposit capacity and low energy requirements, the Fibra filter requires no consumables except electricity.

FILTER TECHNOLOGY

The filters use a proprietary technology whereby particulate is trapped in a constricted fiber bundle.

Using air pressure during filtration the bundles are compressed to prevent the passage of small particles along its length. To flush the filters the air pressure is released to allow the particles to be purged from the system.

OUR COMPANY

Control & Power Systems, Inc. offers automation and control panel design and fabrication as well as installation and service.

Additionally, CPS offers consultation and customer specific CAD (Computer Aided Design) service for your site.
